Digital Solutions for the "Smart Hospital"

28. March 2019 // **Trade Fairs & Events**

Our service experts are looking forward to a trip to Berlin. For the first time, Stiegmeyer will attend the DMEA in April. The newly renamed fair (formerly called conhIT) shows digital solutions for all areas of healthcare.

Stiegmeyer shows exciting innovations at the DMEA trade fair in Berlin

Our service experts are looking forward to a trip to Berlin. For the first time, Stiegmeyer will attend the DMEA in April. The newly renamed fair (formerly called conhIT) shows digital solutions for all areas of healthcare.

This is an ideal opportunity for Stiegmeyer's service to present its intelligent process management for all processes in the hospital. Under the name MIO we develop connectivity solutions for the "Smart Hospital". MIO stands for "Modular - Individual - Organised". Which steps are most suitable for which facility is in fact very individual and carefully planned with the responsible people on site. As an open system, MIO is compatible with many hardware technologies.

The right bed at the right place

An example of the use of MIO is the indoor location of beds. Users can locate their beds anywhere in the hospital. The application scenario determines the technology used. The data can be used for optimal provision and maintenance of the beds. Employees always find the right bed at the right time at the right place.

Another area of application for MIO is automatic documentation. It creates free space for the nursing work. For example, inspections of medical devices are documented. This saves the responsible person a lot of time-consuming manual paperwork.

Stieglmeyer develops digital solutions for the "Smart Hospital".

Transparency with the BEST scan

If the service department of Stieglmeyer is asked to support the process management in a facility, the work often starts with our free BEST-Scan. Our experts come by for an in-depth tour of the hospital and bring transparency into all bed-oriented processes, for example, in the provision or reprocessing. This will reveal potential for optimising costs and relieving employees. Customers receive valuable advice on how to increase patient satisfaction and enhance the image of their facility. All solutions are tailored to the different needs of each customer. At the DMEA our team will inform visitors about the many benefits of BEST.

There are many other offerings to discover at our stand – such as the BLOC software, which controls the life cycle of patient beds, and our bespoke maintenance and service models for your beds. Visitors can also look forward to an innovative new product for controlling all relevant processes directly at the bed.

Our team awaits you from the 9th to the 11th of April at the Berlin Exhibition Center in hall 1.2, booth C-103. If you would like to get in contact with our service experts, please email us at best@stieglmeyer.com.
