Digital, smart, comfortable – the new Stieglmeyer products at MEDICA

06. November 2019 // Trade Fairs & Events

Relief for nursing staff, protection and comfort for patients and digitalisation that really makes everyday life easier: these are the strengths of Stieglmeyer's new products at MEDICA in Düsseldorf from 18 to 21 November.

Digital, smart, comfortable – the new Stieglmeyer products at MEDICA

Exciting innovations from Connectivity to the Quado bedside cabinet to high-quality mattresses

Relief for nursing staff, protection and comfort for patients and digitalisation that really makes everyday life easier: these are the strengths of Stieglmeyer's new products at MEDICA in Düsseldorf from 18 to 21 November.

Connectivity is the term under which Stieglmeyer offers convincing digital solutions for the hospital and nursing care sector. At MEDICA, visitors can explore the new Blue Bridge system extensively. Connected beds send important status information to a dashboard, which nursing staff can view on the PC at the nurses' station as well as on their smartphones or tablets. Has a patient at risk of falling got out of bed? Is the bed accidentally not in its protective lowest position or has its power plug been unintentionally disconnected? Blue Bridge gives staff such information at a glance and enables them to react immediately. The advantages are noticeable relief and greater legal certainty.

With the Stiegmeyer Blue Bridge system, connected beds send important status information to a dashboard. The nursing staff can see whether a patient at risk of falling is standing up or whether a bed has accidentally not been braked.

Evario hospital bed with scales

The new optional scales for the Evario hospital bed also provide relief, especially in intensive care units. They weigh the patient with a precision of up to 200 grams, without the nurse having to transfer him or her out of bed with great physical effort. The scales can be used in any mattress base position and are operated easily and safely with a separate handset. The exact weight can be used to adjust the medication more precisely, for example. With the integrated scale, the Evario is more than ever a "bed for all wards".

The great strength of the Quado bedside cabinet is that it can be used almost anywhere. The space-saving, slim Quado is so flexible and intelligently designed that patients and nursing staff can still use a lot of stowage and storage space. When a patient changes rooms, this bedside cabinet can simply be attached to the head or footboard of the bed and easily transported. This eliminates the need for time-consuming repacking and documentation of the patient's personal belongings. Thanks to its good mobility and low weight, the Quado is also suitable as a medication trolley, especially in nursing homes. Its clear design also makes cleaning easier. If several Quado bedside cabinets are not in use or are waiting to be reprocessed, they can be pushed together to save space.

The wave cut of the Sky-therm® mattress provides particularly effective protection for pressure-sensitive areas of the body.

Three new mattresses

At MEDICA, Stiegmeyer will present its innovative hospital beds – in addition to the Evario, the elegant Puro with its outstanding hygiene properties and the robust Seta pro with integrated full-length safety sides. With their many adjustment options, these beds offer a high degree of comfort. The choice of the right mattress is of course also decisive for health-promoting sleep and effective decubitus prophylaxis. Stiegmeyer is presenting three new attractive models at MEDICA.

With its viscoelastic TEMPUR foam, the TEMPUR-MED® Premium mattress offers particularly high protection against decubitus. The temperature-sensitive material adapts precisely to the body contour of the patient and reduces punctual pressure loads. Clinical studies prove the effectiveness against decubitus.

The Sky-therm® mattress and the Soft-therm mattress also convince with good pressure distribution as well as a dry microclimate and high flexibility. They adjust precisely to the mattress base so that patients enjoy

optimum support even in the Fowler or Cardiac Chair position. With the Sky-therm® mattress, a wave cut between the base layer and the support ensures that pressure-sensitive areas of the body are protected by a particularly thick Sky-therm® layer.

The Stiegemeyer team is looking forward to welcoming all visitors in Hall 14 at Stand D05. Discover our products in an inviting new stand concept.
